Making Ideas Happen

Reality Knowledge and Value: A Basic Introduction To Philosophy

Making Ideas Happen

The Book of Knowledge and Wonder

Hailed for its lucid presentation, TSK blends reasoning and experiential inquiry to offer a unique path of transformation. A deeply exhilarating book, TSK gives readers a language to ask the questions that conventional training teaches us to ignore. Thirty-five exercises reunite philosophy with direct experience.

Reality, Universal Ontology and Knowledge Systems: Toward the Intelligent World

Franklyn was born into a gritty north of England town. His expected path through life would have him live out his years in the manner of that town’s baseline existence. But it wasn’t to be. Perhaps he was pre-selected to break rank so that bigger dreams could be fulfilled. Whatever the prime force may have been, he was to know a different life. Perhaps, too, the corridors of our own reality are flimsier than we believe! On the other side of the wall may lie another path. As Franklyn himself discovers, a perceived reality can be as real as reality itself.

Time, Space and Knowledge

Value, Reality, and Desire is an extended argument for a robust realism about value. The robust realist affirms the following distinctive theses. There are genuine claims about value which are true or false - there are facts about value. These value-facts are mind-independent - they are not reducible to desires or other mental states, or indeed to any non-mental facts of a non-evaluative kind. And these genuine, mind-independent, irreducible value-facts are causally efficacious. Values, quite literally, affect us. These are not particularly fashionable theses, and taken as a whole they go somewhat against the grain of quite a
lot of recent work in the metaphysics of value. Further, against the received view, Oddie argues that we can have knowledge of values by experiential acquaintance, that there are experiences of value which can be both veridical and appropriately responsive to the values themselves. Finally, these value-experiences are not the products of some exotic and implausible faculty of 'intuition'. Rather, they are perfectly mundane and familiar mental states – namely, desires. This view explains how values can be 'intrinsically motivating', without falling foul of the widely accepted 'queerness' objection. There are, of course, other objections to each of the realist's claims. In showing how and why these objections fail, Oddie introduces a wealth of interesting and original insights about issues of wider interest – including the nature of properties, reduction, supervenience, and causation. The result is a novel and interesting account which illuminates what would otherwise be deeply puzzling features of value and desire and the connections between them.

The Principles of Philosophy This textbook introduction offers a new way of approaching metaphysics and epistemology – via links to ethical and social questions. It asks questions such as: Fundamentally, what are we? And what, if anything, do we know?

Education as Service BLACK HISTORY EXTRAVAGANZA honoring Dr. Ben-Jochannan is a labor of love for someone intimately associated with the master teacher for some 40 years as student, traveling companion, mentee and friend. In repayment, this effort to help acknowledge and sustain his name, life's work and historical and philosophic outlook is necessary so the younger generation know of the enormous intellectual light this extraordinary scholar represented in those extremely challenging social and intellectual times of the last half century. As the systematic onslaught against the African (Black) personality continued, one particular scholar, lecturer, historian, publisher, archaeologist and tour guide to Egypt stood unmoved and unrelenting in defense of an entire people's history, culture and spiritual well-being. In this, Dr. Ben took on all disparaging comers as he educated and nurtured intellectual "cubs" becoming equipped to challenge historical distortion and omission manifested from the false mantle of global white supremacy. To accomplish the enormous task, Dr. Ben wrote, innovated self-publishing, lectured, and took students to museums and to Egypt pointing out contradictions between the Existential Data and the symbolic Representation of ancient Egypt. Table of Contents, viz., Introduction; The Awesome Egyptian Temple; Who were the Ancient Egyptians? The Archaeology of Egypt; The Art of Ancient Egypt; Architecture of Ancient Egypt; The Religion of Ancient Egypt; and the History of Egypt, Dr. Ben made a substantial impact while educating students as to the utility and benefits of studying the illustrious African past, emphasizing they accentuate the positive and reject negative aspects of that memorable experience. Like the many intellectual lights, "warrior scholars," of his age, viz., Dr. John Henrik Clarke, Ivan Van Sertima, Leonard James, Carter G. Woodson, Benjamin Carruthers, J.A. Rogers, Jitu Weusi, Leonard Jeffries, among others, Dr. Ben subscribed to one unmistaken academic admonition pursuing excellence, "Publish or Perish." This continuum of praise (Celebrating Dr. Yosef Ben-Jochannan), Black History Extravaganza seeks a starting point for readers, young and old to delve deep and drink from the remarkable fountain represented in fields of study which engaged the great scholar for more than half-a-century.

Heaven's Reality Philosophical naturalism is taken to be the preferred and reigning epistemology and metaphysics that underwrites...
many ideas and knowledge claims. But what if we cannot know reality on that basis? What if the institution of science is threatened by its reliance on naturalism? R. Scott Smith argues in a fresh way that we cannot know reality on the basis of naturalism. Moreover, the “fact-value” split has failed to serve our interests of wanting to know reality. The author provocatively argues that since we can know reality, it must be due to a non-naturalistic ontology, best explained by the fact that human knowers are made and designed by God. The book offers fresh implications for the testing of religious truth-claims, science, ethics, education, and public policy. Consequently, naturalism and the fact-value split are shown to be false, and Christian theism is shown to be true.

Mind, Value, and Reality Quantum physics studies the boundary zone between the physical part of the universe and the nonphysical realm. The Bible frequently refers to the non-physical realm as the unseen or spiritual realm. So, quantum physics has a lot to say about how the spiritual realm works, but there are many confusing and inaccurate interpretations out there in popular media these days. This book will provide simple and easy ways to demystify quantum physics and to understand the Bible. We will lift the veil of the confusion surrounding the unseen realm as we explore many intriguing scientific discoveries that show us about Heaven's reality. We will also see how well the latest discoveries about the unseen realm point back to realities revealed in Scripture.

The Audacity of Faith How to manage and profit from the new financial regulatory reality Now, more than ever, navigating the new financial regulations is paramount for the survival of many large institutions. Managing to the New Regulatory Reality: Doing Business Under the Dodd-Frank Act provides the most important, need-to-know lessons for private sector management, boards of directors, policymakers, and even regulators, shedding light on the movement from crisis to panic, regulatory reform to winning under continuing financial regulatory uncertainty. Reviews the causes of 2008's financial crisis, and assesses its impact on multiple stakeholders Describes and analyzes the impact of the immediate U.S. and G20 policy and regulatory reactions on financial institutions that the crisis response triggered Explains the legislative policies, and examines how institutions and the financial services industry can make these new policies and regulations work for them All financial institutions, but especially large companies, will have to aggressively manage to the new regulatory reality. Managing to the New Regulatory Reality is the must-have survival guide to sustaining profitability despite all the new red tape.

Mind Your Thoughts The classic work that redefined the sociology of knowledge and has inspired a generation of philosophers and thinkers. In this seminal book, Peter L. Berger and Thomas Luckmann examine how knowledge forms and how it is preserved and altered within a society. Unlike earlier theorists and philosophers, Berger and Luckmann go beyond intellectual history and focus
on commonsense, everyday knowledge—the proverbs, morals, values, and beliefs shared among ordinary people. When first published in 1966, this systematic, theoretical treatise introduced the term social construction, effectively creating a new thought and transforming Western philosophy.

Srimad Bhagavadgita Originally published in 1937. This book addresses the importance of the theory of values that rests on a general metaphysical understanding founded on a comprehensive view of all aspects of the world. The author speaks against the absolutist theories with a realistic one encompassing a theory of space and time and considering value as an object of immediate intuition. These great philosophical questions feed into discussions of the philosophy of religion and of science. Garnett distinguishes between spiritual and other values on the ground that the spiritual values are not subjective to satiety, while other values are. He contends that our knowledge of mind is as direct and reliable as our knowledge of the physical world. This is an important early book by an influential 20th Century thinker.

Reality, Knowledge, and Value The world’s best introduction to philosophy, Knowledge, Reality, and Value explains basic philosophical problems in epistemology, metaphysics, and ethics, such as: How can we know about the world outside our minds? Is there a God? Do we have free will? Are there objective values? What distinguishes morally right from morally wrong actions? The text succinctly explains the most important theories and arguments about these things, and it does so a lot less boringly than most books written by professors. "My work is all a series of footnotes to Mike Huemer." - Plato "This book is way better than my lecture notes." - Aristotle "When I have a little money, I buy Mike Huemer's books; and if I have any left, I buy food and clothes." - Erasmus

Contents

Michael Huemer is a professor of philosophy at the University of Colorado, where he has taught since the dawn of time. He is the author of a nearly infinite number of articles in epistemology, metaphysics, ethics, and political philosophy, in addition to seven other amazing and brilliant books that you should immediately buy.

Franklyn A comprehensive defence of the rationalist view that insight independent of experience is a genuine basis for knowledge.

Knowledge, Reality, and Values The present volume contains a reprint of the preface and the first part of the Principles of Philosophy, together with selections from the second, third and fourth parts of that work, corresponding to the extracts in the French edition of Gamier, are also given, as well as an appendix containing part of Descartes' reply to the Second Objections (viz., his formal demonstrations of the existence of Deity). The translation is based on the original Latin edition of the Principles, published in 1644. The work had been translated into French during Descartes' lifetime, and personally revised and corrected by him, the French text is evidently deserving of the same consideration as the Latin originals, and consequently, the additions and variations of the French version have also been given--the additions being put in square brackets in the text and the variations in the footnotes.

The Knowledge of Reality Mind Your Thoughts is a book that will help you quiet and focus your thoughts so you speak directly to your unconscious state of being in a language the mind understands. Meditation is nothing more than relaxation, and in a meditative state, your conscious can relax and allow you to speak directly to the unconscious. The unconscious is in charge of your life, even though you allow your conscious to be in control. If you want to experience change in your life, you need to learn to bypass the conscious control which can be described as critical, analytical, and most of all judgmental. Meditating through relaxation is how you reprogram your unconscious with new concepts and information. The unconscious learns by applying this information against the storage of all your memories, experiences, reactions, and emotions. Also, the unconscious is much more accepting of change because it processes information without judgment. You will see both mental and physical changes resulting from this process. Practice with the thoughts in this book; your unconscious will understand even if your conscious seems confused. Mind your thoughts and experience a human metamorphosis from the inside out. The purpose of meditation is to quiet the mind. Meditation removes the clutter of thoughts from everyday life, and also helps you to get in touch with your higher consciousness. It does take practice, so do not become discouraged. Set aside 45 minutes each evening before you go to sleep. Sit in a quiet room, in a comfortable and relaxed position wearing loose clothing. Close your eyes and take a deep breath in through your nose and let it out slowly through your mouth. With each breath in, clear your mind of all thoughts, and feel your body relax. Repeat this 9 times before beginning. This book contains 81 thoughts for you to meditate on. There are 9 sets of 9 thoughts each. Start with Set One and allow 5 minutes of meditation for each thought. After your initial warm up of 9 deep breaths, read the first thought of the first set. Close your eyes and continue your deep breathing as you reflect on the thought and what it may mean to you and your life. Think of nothing else. Repeat this with each thought until you complete Set One. It will take you at least 9 evenings to get through all of the sets in the book. You may want to repeat a set over and over again before moving on to the next set. Eventually, you will have your favorite thoughts that you will want to dedicate your meditations on. Most people enjoy thoughts of wisdom, but rarely take the time to internalize them enough to be life changing. Practice mindfulness in life and create ripples
that will forever change your life. This is not an instructional book on the art of meditation.

Mysteries of Mind Knowledge and Reality brings together a selection of Colin McGinn's philosophical essays from the 1970s to the 1990s, whose unifying theme is the relation between the mind and the world. McGinn defends a realist view, but emphasizes the epistemological problems that come with it. He has written a new postscript to each essay, placing it in its philosophical context and offering his current reflections on the topic.

Theory and Reality "This book provides cutting-edge research on reality, its nature and fundamental structure, represented both by human minds and intelligent machines--striving to describe a world model and ontology; organized human knowledge; powerful reasoning systems; and secure communication interoperability between human beings and computing reasoning systems promising the profound revolution in human values and ways of life"--Provided by publisher.

Value, Reality, and Desire Alvin Plantinga is one of the leading figures in Anglo-American metaphysics, epistemology and philosophy of religion; his work in these areas has been the focus of wide scholarly attention. This collection of essays, all of which were written specifically for this volume in honor of Plantinga's 70th birthday, ranges broadly over topics in metaphysics and epistemology and includes contributions by some of the best philosophers writing today.

Shattered Perceptions The Book of Knowledge and Wonder is a memoir about claiming a legacy of wonder from knowledge of a devastating event. In some ways it has the feel of a detective story in which Steven Harvey pieces together the life of his mother, Roberta Reinhardt Harvey, who committed suicide when he was eleven, out of the 406 letters she left behind. Before he read the letters his mother had become little more than her death to him, but while writing her story he discovered a woman who, despite her vulnerability to depression, had a large capacity for wonder and a love of familiar things, legacies that she passed on to him. The book tackles subjects of recent fascination in American culture: corporate life and sexism in the fifties, mental illness and its influence on families, and art and learning as a consolation for life's woes, but in the end it is the perennial theme of abiding love despite the odds that fuels the tale. As the memoir unfolds, his mother changes and grows, darkens and retreats as she gives up her chance at a career in nursing, struggles with her position as a housewife, harbors paranoid delusions of having contracted syphilis at childbirth, succumbs to a mysterious, psychic link with her melancholic father, and fights back against depression with counseling, medicine, art, and learning. Harvey charts the way, after his mother's death, that he blotted out her memory almost completely in his new family where his mother was rarely talked about, a protective process of letting go that he did not resist and in a way welcomed, but the book grows out of a nagging longing that never went away, a sense of being haunted that caused the writer to seek out places alone--dribbling a basketball on a lonely court, going on long solitary bicycle rides, walking away from his family to the edge of a mountain overlook, and working daily at his writing desk--where he might feel her presence. In the end, the loss cannot be repaired. Her death, like a camera flash in the dark, blotted out all but a few lingering memories of her in his mind, but the triumph of the book is in the creative collaboration between the dead mother, speaking to her son in letters, and the writer.
piecing together the story from photographs, snatches of memory, and her words so that he can, for the first time, know her and
miss her, not some made up idea of her. The letters do not bring her back—he knows the loss is irrevocable—but as he shaped them
into art, the pain, that had been nothing more than a dull throb, changed in character, becoming more diffuse and ardent, like
heartache.

Knowledge and Reality The main reason I am writing yet another book about chickens is because this book will discuss some very
important points that were never presented to us in any book or Internet information we came across:- The reality of the
responsibility you are taking on by inviting chickens to live with you. - What happens when a chicken gets sick? - What is a shell-less
egg and is my chicken going to die? - Can I have a garden AND chickens? This book will also cover all bases from the chicken's-eye
view, down here in the dirt, where there are all manner of wonderful things to eat and poop on.

Naturalism and Our Knowledge of Reality How the world's leading innovators push their ideas to fruition again and again Edison
famously said that genius is 1 percent inspiration, 99 percent perspiration. Ideas for new businesses, solutions to the world's
problems, and artistic breakthroughs are common, but great execution is rare. According to Scott Belsky, the capacity to make
ideas happen can be developed by anyone willing to develop their organizational habits and leadership capability. That's why he
founded Behance, a company that helps creative people and teams across industries develop these skills. Belsky has spent six
years studying the habits of creative people and teams that are especially productive—the ones who make their ideas happen time
and time again. After interviewing hundreds of successful creatives, he has compiled their most powerful—and often
counterintuitive—practices, such as: • Generate ideas in moderation and kill ideas liberally • Prioritize through nagging • Encourage
fighting within your team While many of us obsess about discovering great new ideas, Belsky shows why it's better to develop the
capacity to make ideas happen—a capacity that endures over time.

Great Trainers Make It Happen

Managing to the New Regulatory Reality How does science work? Does it tell us what the world is “really” like? What makes it
different from other ways of understanding the universe? In Theory and Reality, Peter Godfrey-Smith addresses these questions by
taking the reader on a grand tour of more than a hundred years of debate about science. The result is a completely accessible
introduction to the main themes of the philosophy of science. Examples and asides engage the beginning student, a glossary of
terms explains key concepts, and suggestions for further reading are included at the end of each chapter. Like no other text in this
field, Theory and Reality combines a survey of recent history of the philosophy of science with current key debates that any
beginning scholar or critical reader can follow. The second edition is thoroughly updated and expanded by the author with a new
chapter on truth, simplicity, and models in science.

Knowledge, Reality, and Value The best-selling author of The God Delusion and the artist of such award-winning graphic novels as
Wizard and Glass address key scientific questions previously explained by rich mythologies, from the evolution of the first humans and the life cycle of stars to the principles of a rainbow and the origins of the universe. 150,000 first printing.

Reality? Knowledge? Philosophy! Envious of her best friends lavish lifestyle, a young woman wonders how different her life would be if she had an opportunity to change her past.

Management Culture and Corporate Social Responsibility Everything you need to know to look after yourself to bring about and maintain perfect health, prosperity, wealth, happiness, quality of life and longevity. It reveals that we are, without realising, not doing enough or the right things to protect our health and prosperity which is equally extremely damaging to nature, wildlife, oceans, sea-life, fresh springs, waterways and air, and us. The Book by Linde utilises new and ancient knowledge from around the world, over the millennia identifying what changes we need to make to enhance every aspect of our lives with simple solutions for almost every situation. It is your most powerful contribution to protecting, nurturing and saving our planet. In summary, THE BOOK ‘Consists of Six Chapters which incorporates a summary within each one: Lifestyle; Food & Nutrition; Medical Care; Mind; Water; and Now Live the final chapter which you can cast your eye over first as it is a synopsis of the complete works. It is highly recommend to read from cover to cover but, it is packed with valuable information to just use as a Reference Manual on a day to day basis. Teaches you how to look after your body and mind to ultimately prevent illness, but also to help regain and maintain perfect health; Provides countless number of practical, realistic & simple tips to easily adopt into your day to day lifestyle improving quality of life, saving time & money and gaining longevity; Fuses together specialised areas in health & mind, lifestyle & environment under one cover; Identifies our day to day toxic exposures that we are unaware of and provides successful resolutions; Gives you complete fundamental knowledge and awareness, to use your courage to take responsibility for your life enhancing your health, prosperity and happiness; Provides you with ancient knowledge and practices to new, from science including quantum physics, to philosophy, psychology, and important detail on nutrition, exercise, energies and medicine; Is very current, answering all the conflicting hype about diets, the next super food or the bad effects of conventional drugs or sugar that are in the media weekly, even daily; For more information please visit www.thebookbook.co.uk

Examining Islam

Meaning, Knowledge, and Reality "The need for scientific knowledge springs from a natural human curiosity to understand our world, but also from a genuine desire to help humanity. The great scientific discoveries have given us incredible knowledge about the natural world, have improved our lives through new technologies, and have taught us a great deal about the capabilities and the limitations of our human perspective." In The Mind of Science: From Aristotle to Einstein, author Michael Sidiropoulos takes you on a thought-provoking journey through the history of science from a philosophical standpoint. Beginning with the calculation of the size of the earth by Eratosthenes, chief librarian at the Library of Alexandria, Sidiropoulos for the most part avoids the use of mathematical formulas as he explores the ideas, and ideals, that lie behind scientific advancement throughout the ages. It's a
fascinating voyage that will enrich you with a greater awareness of the interplay between science and philosophy—how they're similar, how they're different, and how they complement each other.

Knowledge and Reality ATTENTION TRAINERS: It's Not About YOU - It's About the LEARNER! What is the biggest mistake a trainer can make? Quite simply, it is focusing all of their efforts on themselves and not their students! Many inexperienced trainers fall into this trap, but it doesn't have to happen to you! This book provides easy-to-execute examples that, when utilized, will make any rookie trainer look like a seasoned pro in just one day! You will learn how to structure the classroom experience in such a positive way that I guarantee it will make a difference in your professional life and in the lives of your participants. The techniques outlined in this book will help you to become the Great Trainer you have always wanted to be - because although good trainers may know these methods, Great Trainers make it happen! Inside, you will discover how to: - Create an inviting physical and emotional learning environment for your students. An inviting learning environment leads to higher levels of participation, retention, and on-the-job application! - Be less of an instructor and more of a "Tour Guide." Utilizing tour guide techniques will make your class anything-but-ordinary, causing people to look forward to your next event! - Utilize Great Trainer techniques whether you're facilitating a 5-day course, a 60-minute training session, or a 15-minute presentation! - Apply the techniques that will help you go W A C C O for your participants - without spending a dime! Get on the road to continuous training improvement and start reading!

The Social Construction of Reality This monograph focuses on the level of management culture development in organizations attempting to disclose it not only with the help of theoretical insights but also by the approach based on employees and managers. Why was the term "management culture" that is rarely found in literature selected for the analysis? We are quite often faced with problems of terminology. Especially, it often happens in the translation from one language to another. While preparing this monograph, the authors had a number of questions on how to decouple the management culture from organization's culture and from organizational culture, how to separate management culture from managerial culture, etc. However, having analysed a variety of scientific research, it appeared that there is no need to break down the mentioned cultures because they still overlap. Therefore, it is impossible to completely separate the management culture from the formal or informal part of organizational culture. Management culture inevitably exists in every organization, only its level of development may vary.

The Magic of Reality "Knowledge, Reality, and Values" provides readings that reflect the history of philosophy as it spread from ancient Greece into the Muslim world of the Middle Ages, which in turn influenced the development of philosophy in Medieval and Enlightenment Europe. It presents a broad view of philosophy, including a diversity of viewpoints representing the complexity of both the analytic and continental philosophical traditions, and offers critical perspectives from feminism, postcolonial theory, and critical race studies. "Knowledge, Reality, and Values" introduces philosophy through concise selections representing the diversity of philosophical thought, from ancient Greek philosophy through contemporary work in metaphysics, epistemology, and ethics. The text highlights a variety of contemporary approaches, including analytic philosophy, American pragmatism, and existentialism. Beginning with a section on critical thinking, introducing deductive validity and soundness and inductive reasoning, "Knowledge,
Reality, and Values" equips the student with the reasoning skills needed to comprehend and assess the readings. "Knowledge, Reality, and Values" is best suited for introductory undergraduate courses in general philosophy, ethics, and social and political philosophy, as well as for continuing education courses and the interested casual reader.

Jamie Lindsay holds an M.A. from San Francisco State University and an M.Phil. from the Graduate Center, City University of New York, where he is currently working towards his Ph.D. He teaches Political Philosophy, Social Philosophy, and Ethics courses at Hunter College and Brooklyn College, where he has also taught within the SEEK Program and College Now. Dena Shottenkirk, a Lecturer at Brooklyn College, received her Ph.D. from the Graduate Center, City University of New York. She also holds an M.F.A. in visual art from Mason Gross School of the Arts, Rutgers University. Shottenkirk exhibits her artwork and disseminates her writings under the banner of The System Project.

Here, Hold My Chicken! African Religion VOL 3: Memphite Theology: Mysteries of Mind Mystical Psychology & Mental Health

for Enlightenment and Immortality based on the Ancient Egyptian Philosophy of Menefer - Mysticism of Ptah, Egyptian Physics and Yoga metaphysics and the Hidden properties of Matter. This volume uncovers the mystical psychology of the Ancient Egyptian wisdom teachings centering on the philosophy of the Ancient Egyptian city of Menefer (Memphite Theology). How to understand the mind and how to control the senses and lead the mind to health, clarity and mystical self-discovery. This Volume will also go deeper into the philosophy of God as creation and will explore the concepts of modern science and how they correlate with ancient teachings. This Volume will lay the groundwork for the understanding of the philosophy of universal consciousness and the initiatic/yogic insight into who or what is God?

Reality, Knowledge, and Value

This volume collects some of John McDowell’s influential papers, written at various times over the last two decades. One group of essays deals mainly with issues in the interpretation of the ethical writings of Aristotle and Plato. A second group of papers contains more direct treatments of questions in moral philosophy that arise naturally out of reflection on the Greek tradition. Some of the essays in the second group exploit Wittgensteinian ideas about reason in action, and they open into the third group of papers, which contains readings of central elements in Wittgenstein's difficult later work. A fourth group deals with issues in the philosophy of mind and with questions about personal identity and the special character of first-person thought and speech.

Virtual Reality for Beginners! The Audacity of Faith is about the greatest five-letter word in the English language: FAITH, and about how critical it is to our survival, whether or not we are Christians.

In Defense of Pure Reason Originally published in 1930, this book presents the outline of a course in metaphysics delivered by Wincenty Lutosławski at a variety of academic institutions from 1890 onwards. Numerous aspects of reality are discussed in an effort to form a unified conception of it, from the material world through to abstract spirituality.
The Mind of Science Srimad Bhagavadgita (A Vedanta Text)

Upanisads are called Vedanta and the synthesis of its concepts is discussed in 'Brahma Sutra' by the great sage Vedvyas. The knowledge of the fundamental entities, as is propounded in the Upanisads, related to the Absolute (Brahma, Pure Self) is included in Srimad Bhagavadgita (Gita), the dialogue between Lord Srikrshna and the mighty-armed Arjuna. That is why the Gita Text is also called a Vedanta Text. Although from the beginning to the end in the text the Blessed Lord Srikrshna has given the sermons of carrying out one's duty inspired by one's own inborn nature, but to understand the entire teachings of the Lord the study of the complete text is essential. This is a unique text of metaphysics (the science of reality) and ethics (the art of union with the reality) by which, following the scriptural method of listening, analytical reasoning and firm meditation, a person gets spiritual happiness. Many enlightened sages and learned authors have written commentaries on Gita which are very valuable from the point of view of Religion and Philosophy. In the present text, taking help of the few of these, effort is being made to present the subject matter in a different form. Based on personal experience the following five points are taken into consideration. First, a suitable title is given to each Sloka (verse) so that essentials of the subject matter are known in a short time from the contents of the text. Second, looking to the need of a large number of devotees who have no indepth knowledge of Sanskrit and its pronunciation, each Sloka is also given in the roman script. Third, the meaning of each Sanskrit word is explained in Hindi in such a way that entire meaning of the Sloka is easily understood and remembered. Fourth, keeping in view the pattern of present education and interest of young students, the meaning of each Sloka is also given in English along with Hindi. Fifth and the last point is about the short explanation of each Sloka. The thoughts of any one tradition in vogue are not fully incorporated but partly taken into consideration, which are essential to understand the in-depth meaning of the teachings and the rest is left to learned reader for his/her interpretations. It is advised to study the known standard texts for detailed explanations.
